DESCRIPTION :

BIOGREEN AIR MIST – EUCALYPTUS has been formulated for the environment conscious customers - the home environment, that is. Consumers are becoming ever more concerned about issues such as air quality and VOCs (Volatile Organic Carbon) in the home environment. Traditional cleaning products and air fresheners contain chemicals such as glycol ethers, propylene glycols, PEGs, ethoxylated surfactants, hydrocarbons, quaternary ammonium compounds, phthalates, etc, etc. Some of these chemicals have been linked to the increasing rates of asthma and eczema in children, some are reproductive toxins and some are suspected carcinogens.

BIOGREEN AIR MIST – EUCALYPTUS contains **NO ADDED CHEMICALS AT ALL!!** – nothing but pure Australian distilled eucalyptus oil in a solution of pure perfumers' grade alcohol and filtered water.

Eucalyptus oil has a long history of **safe applications in the home**, such as:

Medicinal and antiseptic: The cineole-based eucalyptus oil is used as component in pharmaceutical preparations to relieve the symptoms of influenza and colds, in products like cough sweets, lozenges, ointments and inhalants. Eucalyptus oil has antibacterial effects on pathogenic bacteria in the respiratory tract. Inhaled eucalyptus oil vapor is a decongestant and treatment for bronchitis. Cineole controls airway mucus hyper-secretion and asthma via anti-inflammatory cytokine inhibition. Eucalyptus oil also has anti-inflammatory and analgesic qualities as a topically applied liniment ingredient. Eucalyptus oil is also used in personal hygiene products for antimicrobial properties in dental care and soaps. It can also be applied to wounds to prevent infection.

Repellent : Cineole based eucalyptus oil is used as an insect repellent.

Flavouring: Eucalyptus oil is used in flavouring. Cineole based eucalyptus oil is used as a flavouring at low levels (0.002%) in various products, including baked goods, confectionery, meat products and beverages. Eucalyptus oil has antimicrobial activity against a broad range of foodborne human pathogens and food spoilage microorganisms. Non-cineole peppermint gum, strawberry gum and lemon ironbark are also used as flavouring.

Fragrance: Eucalyptus oil is also used as a fragrance component to impart a fresh and clean aroma in soaps, detergents, lotions and perfumes.
